Instructor: Dr. Tamer Nazir Madi

Date: 08/03/2023

Academic Year: 2022/2023

Semester: Second

Faculty: Information Technology

Department: Multimedia & Web

Assignment No. 01: Content Modelling

The goal of this assignment is to deepen the students' understanding of the content modelling and how to create a content model. This assignment is an *individual assignment* where each student should create a content model for the following case:

Imagine that you are involved in a project to design a website to monitor child's development in school. The website is called School Talk. It is a web-based school platform dedicated to facilitate the relationship between school and parents and make it easier for parents to monitor the development of their children in school. Suppose that you and your team have held a meeting to create the content model for the website and determined the following content types to be included. How would you complete the work and draw the content model?
